EN

Dear Customer,

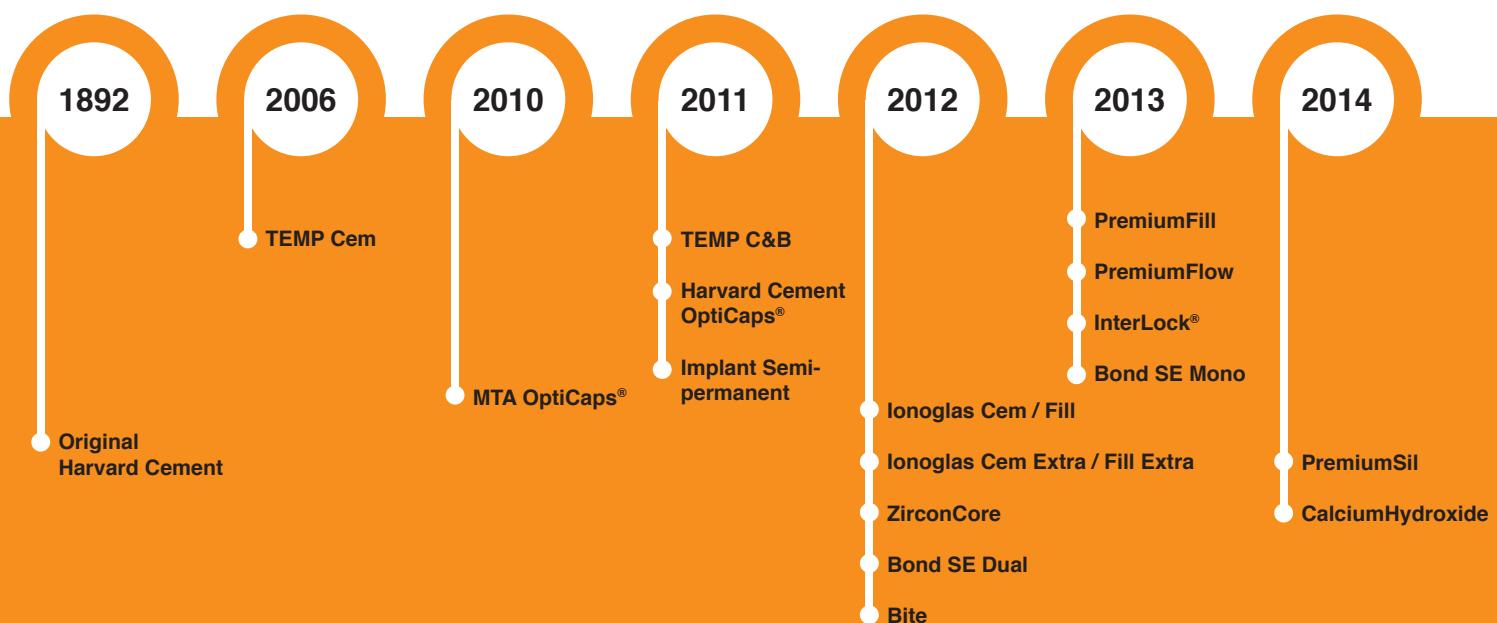

Harvard® is one of the first registered dental trademarks worldwide. In 1892 the founder of the famous brand, Robert Richter (D.D.S.), presented it at the national registration authority in Germany.

Born in Berlin in 1856, Robert Richter moved to the United States of America in 1878 to study dentistry at the University of Maryland School of Dentistry. He settled in Philadelphia and run a dental practice of his own, moving back to Berlin, Germany in 1884 where he began to develop a product which is suitable for luting and filling. Following numerous trials the zinc

phosphate cement was invented by him and therefore, the first reliable luting cement was born.

At this time nearly everything coming from the United States of America had a good reputation. Dr. Richter, with a very fine sense of marketing, named his product in 1892 "Harvard Cement" and founded in Berlin the "Harvard Dental Compagnie". The three letters "HDC" are still used in the Harvard logo.

Since 1892 approximately 375 million crowns worldwide have been luted with Harvard Cement. The Harvard product portfolio has widened during the last decade and incorporate a huge range of different high

HARVARD®

quality dental materials – all produced in our factory in Germany.

Harvard's research and development offers today a full range of high quality dental products for restorative, endodontics and prosthetics.

In recent years many product launches and innovations have significantly expanded the range of products offered by the Harvard brand.

Recently **Harvard SuperSnap®**, a Vinylpolysiloxane impression material with a sensational snap-set behaviour and **BioCal-CAP®** as a bioactive plaster for direct and

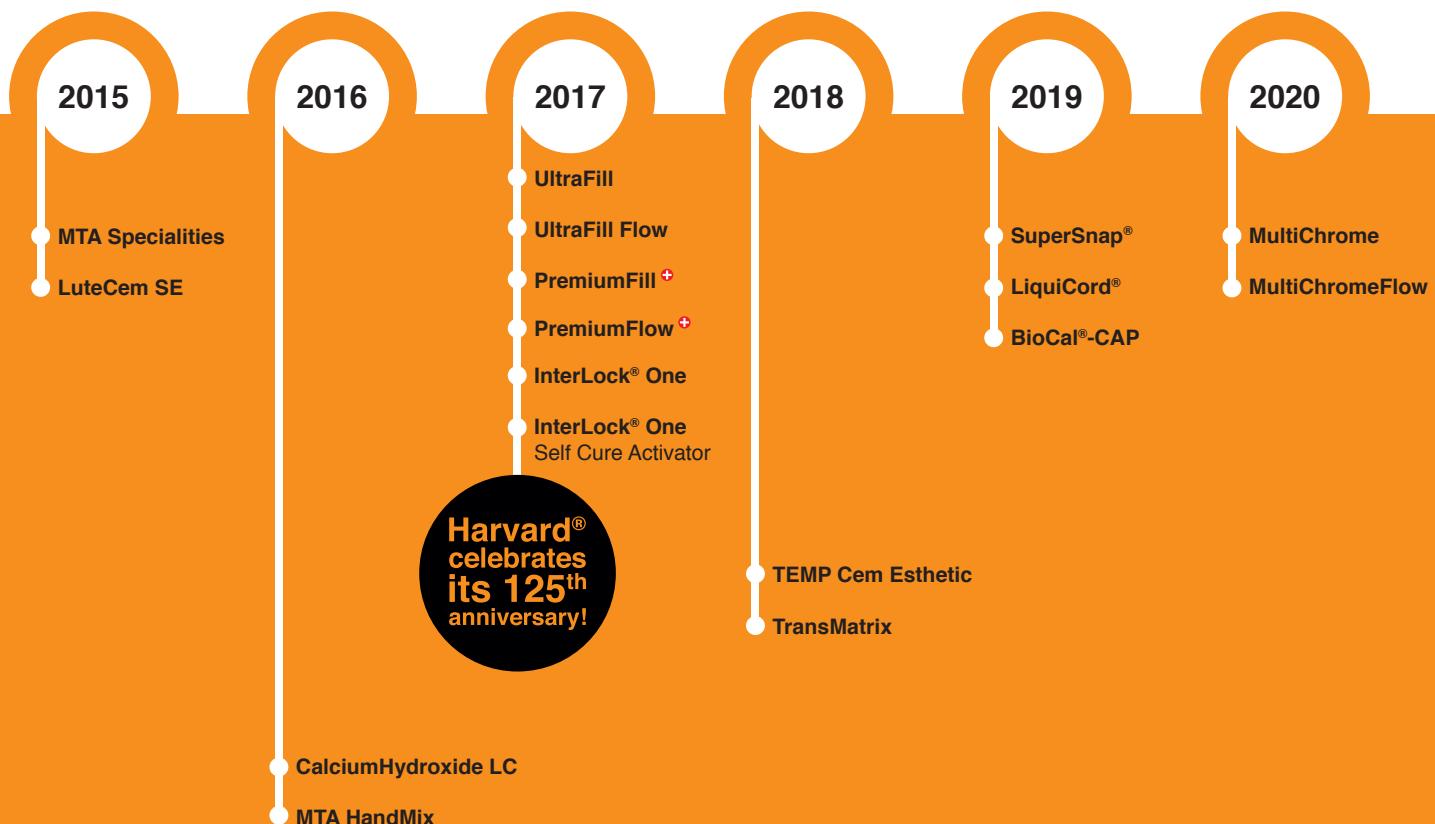

indirect pulp capping.

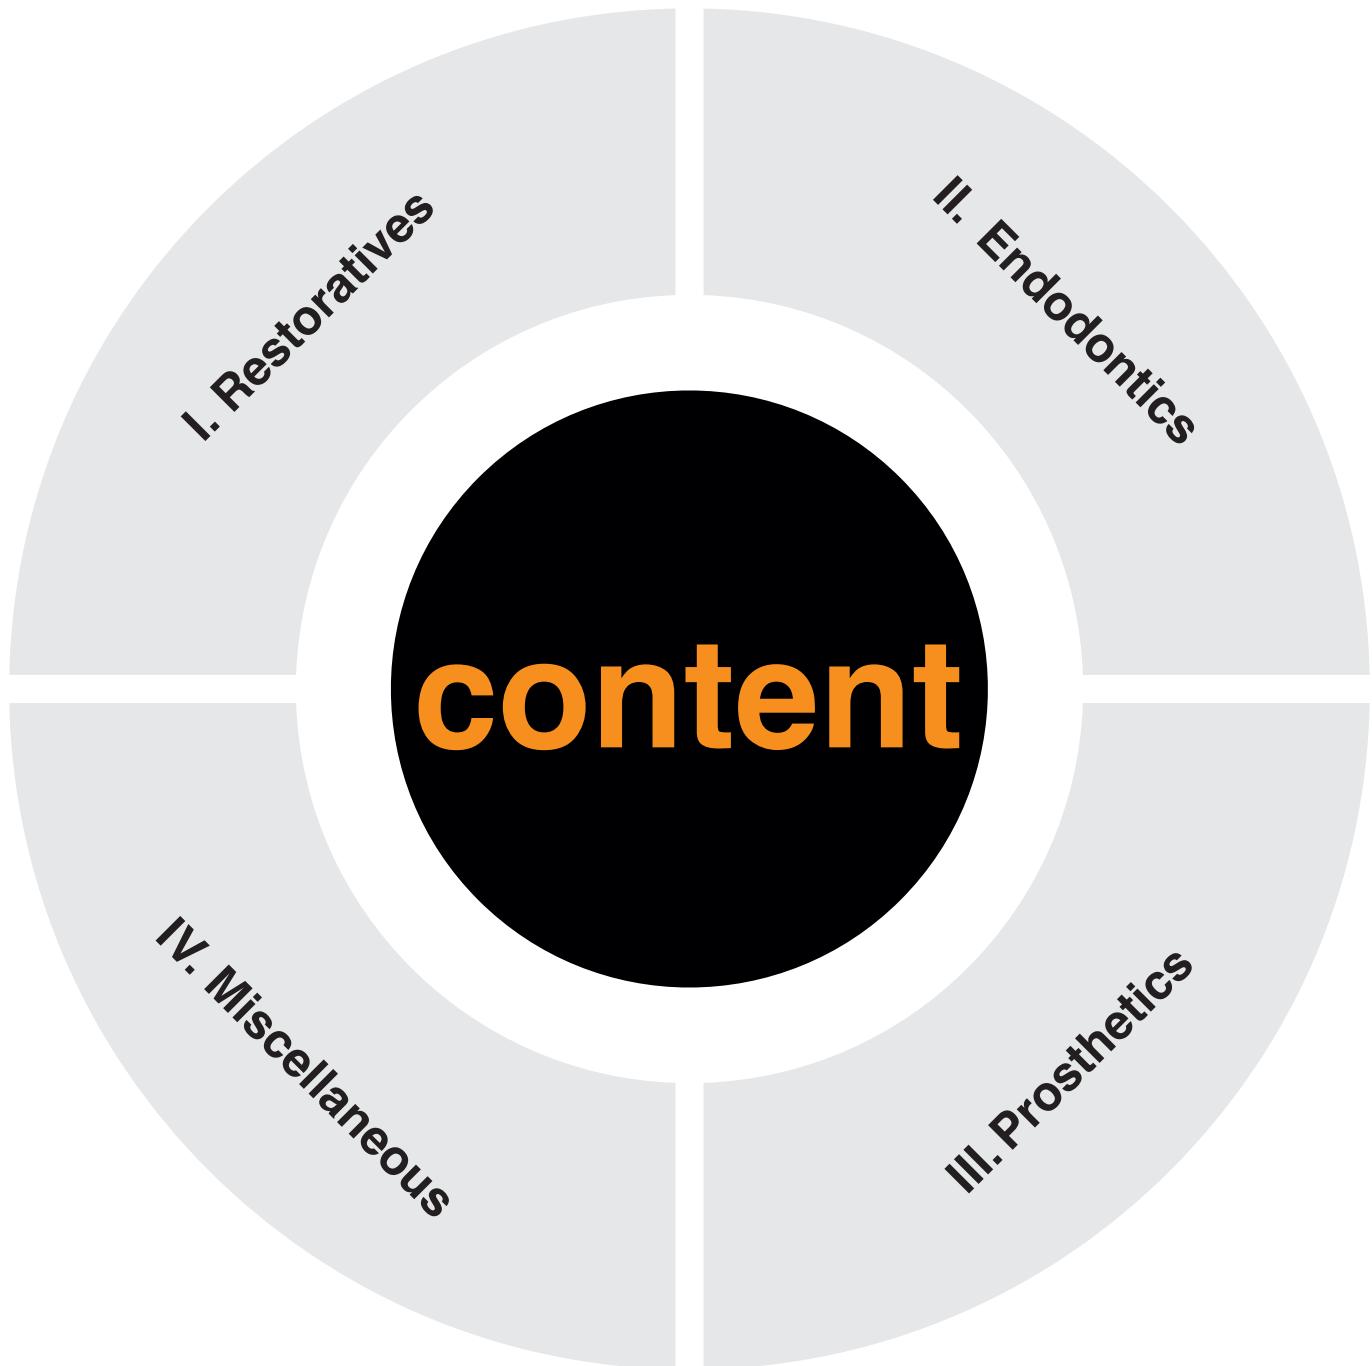

New, and for the first time now in this catalogue, **Harvard MultiChrome**: a shade-adaptive composite creating margins that simply disappear. For all preparation classes, it suits almost all tooth shades.

Please see more about **Harvard MultiChrome** on page 8 in this catalog. „It's magic.“

Yours faithfully,

the Harvard Team

2: Adhesives

Harvard InterLock® ONE

Universal Adhesive

- **Universal:** suitable for all tooth conditioning techniques: with or without etching gel, wet or dry
- Only one thin layer necessary
- High and reproducible bond strength to enamel and dentin even under long term stress
- Effective marginal seal for low risk of postoperative sensitivity
- Excellent performance also with self or dual cure composites when light curing is possible, if not see e.g. for adhesive post cementing in the root canal mix additional with **Harvard InterLock® ONE Self Cure Activator***
- Convenient and precise application with the triangle ergonomic bottle with defined drop size

*if light curing of Harvard InterLock® ONE cannot be achieved, mix **Harvard InterLock® ONE** with **Harvard InterLock® ONE Self Cure Activator**

Restoratives

2: Adhesives

• Harvard InterLock®

Very strong, self-etch, light cure bonding

- Long-term and safe adhesion to enamel and dentin
- Extremely reliable
- High and even bond strength
- Easy and fast application
- Excellent seal
- Not technique and moisture sensitive
- Hydrophilic for wet bonding technique
- For perfect margins

Harvard InterLock®
2 x 5 ml bottle, 50 Microbrush®,
5 mixing wells

7093603

Microbrush®
refill bag with 50 applicators

7095156

• Harvard Bond SE Mono

Self-etch light cure bonding; etching, priming
and bonding in one step

- Strong and long-lasting adhesion to enamel and dentin
- Only one layer necessary
- Hydrophilic for wet bonding technique

Harvard Bond SE Mono Kit
5 ml bottle, 25 Microbrush®, 5 mixing wells

2: Adhesives

Harvard Self-Bond

Self-etch, light cure bonding

- For bonding of composites on dentin and enamel
- No extra etching necessary
- Only one layer necessary
- Easy application
- Hydrophilic for wet bonding technique

Harvard Self-Bond
5 ml bottle

7083218

Harvard Bond TE Mono

Light cure one bottle adhesive for total-etch technique

- Strong bonding to enamel and dentin
- Strong bonding of light cure composites, non-precious and precious metals
- Hydrophilic for wetbonding technique
- 2 bonding layers necessary; very strong adhesion

Harvard Bond TE Mono
5 ml bottle

7083607

Harvard Etch

Thixotropic etching gel for etching of enamel and dentin

- Selective enamel etching or total-etch technique for:
 - Composite restorations
 - Sealing of fissures
 - Adhesive cementation of inlays, onlays, crowns and bridges
- Optimal consistency: stays where placed
- Thixotropic, controlled etching

Harvard Etch
2 ml syringe, 3 needle tips

Harvard Ionocoat LC

Light cure protective varnish for conventional glass ionomer cements

Properties and advantages

- Easy to use
- Methacrylate-free
- Protects the filling cement during the first hours from washouts

Harvard Ionocoat LC
5 ml bottle

7052000

Harvard Ionoressin Prime LC

Light cure primer for resin-reinforced glass ionomer cements

Properties and advantages

- For further improvement of the adhesive force
- Easy application

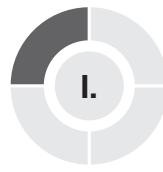

Harvard Ionoressin Prime LC
5 ml bottle

7051000

Restoratives

5: Core Build-Up and Post Cementing

Harvard ZirconCore

Dual cure core build-up and post cementation composite

- Optimal consistency for two indications:
core build-up and post cementing
- "Cuts like dentin"
- Very good mechanical properties for durable restorations
- Contains substantial amount of nano-zirconia particles
- Fluoride release
- Very good radiopacity
- Thixotropic properties
- For optimal results, use with **Harvard InterLock® ONE / Harvard InterLock® ONE Self Cure Activator** or with **Harvard Bond SE Dual**

Harvard ZirconCore	7083600
5 ml minimix syringe, 10 mixing tips, 10 intra tips long, in the shade A3	
Harvard Mini 1:1 O-Brown	7083610

Harvard InterLock® ONE	7083611
Universal Adhesive 5 ml bottle (see also page 15)	
Microbrush®	7095156
refill bag with 50 applicators	

Important note:
Only in combination with
Harvard InterLock® ONE Universal Adhesive

Universal adhesive

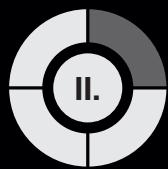

Harvard Bond SE Dual

Dual cure self-etch bonding (2 components, 1 step)

- Etching, priming and bonding after mixing in one step
- Only one layer necessary
- Strong and long-lasting adhesion to enamel and dentin
- Hydrophilic for wet bonding technique
- For use with dual cure composites e.g. **Harvard ZirconCore**

Harvard Bond SE Dual	7083602
2 x 5 ml bottle, 50 Microbrush®, 5 mixing wells	
Harvard Bond SE Dual Refill	7083605
2 x 5 ml bottle	
Microbrush®	7095156
refill bag with 50 applicators	

Endodontics

1: Pulp Capping

The bioactive
plaster for
the pulp.

NEW

Endodontics

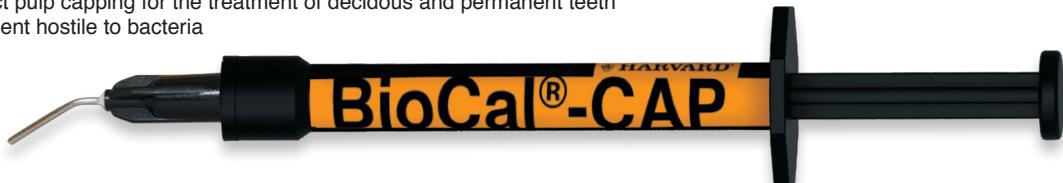

1: Pulp Capping

Harvard BioCal®-CAP

Bioactive light cure, resin-modified MTA cement for direct and indirect pulp capping

- Calcium release and high pH value promotes the formation of hydroxyapatite respectively tertiary dentin
- For direct and indirect pulp capping for the treatment of deciduous and permanent teeth
- Creates an environment hostile to bacteria
- Moisture tolerant
- Virtually no solubility
- Radiopaque
- Light cure

Harvard BioCal®-CAP
1 g syringe, 12 needle tips
4 x 1 g syringe, 50 needle tips

7081550
7081551*

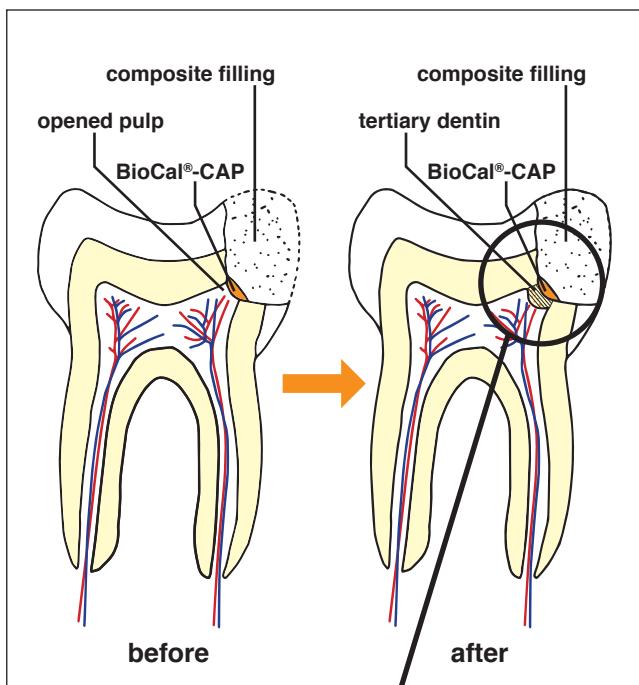

Harvard NeedleTips H22
refill bag with 50 needle tips

7095162

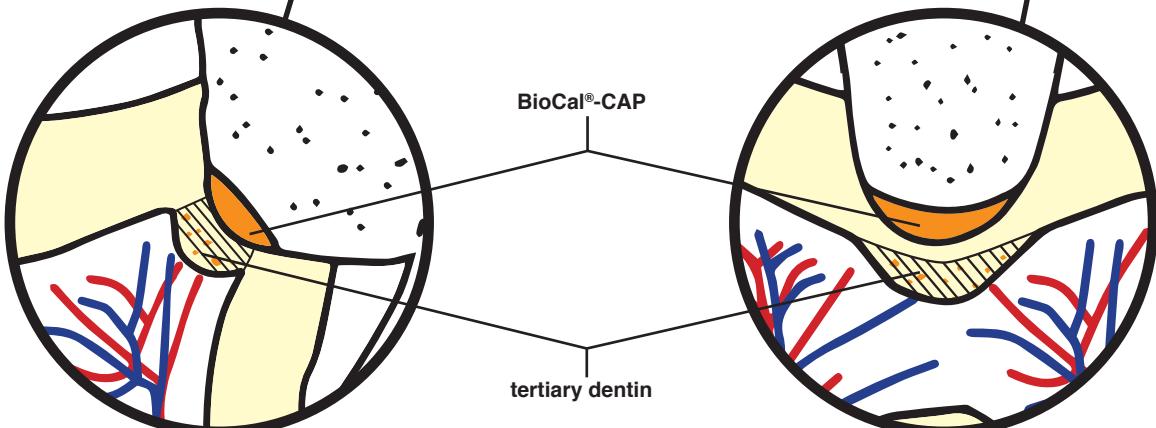

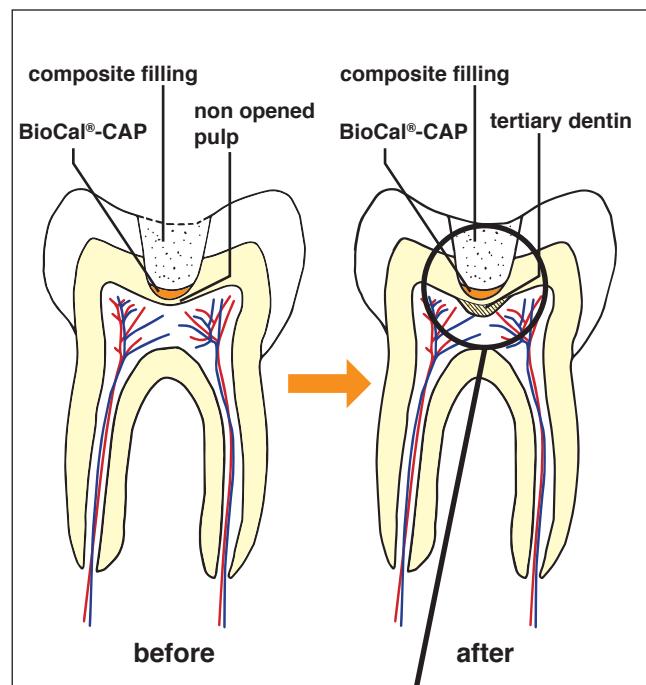

* No stock item, please contact the Harvard sales team.

Direct pulp capping

Indirect pulp capping

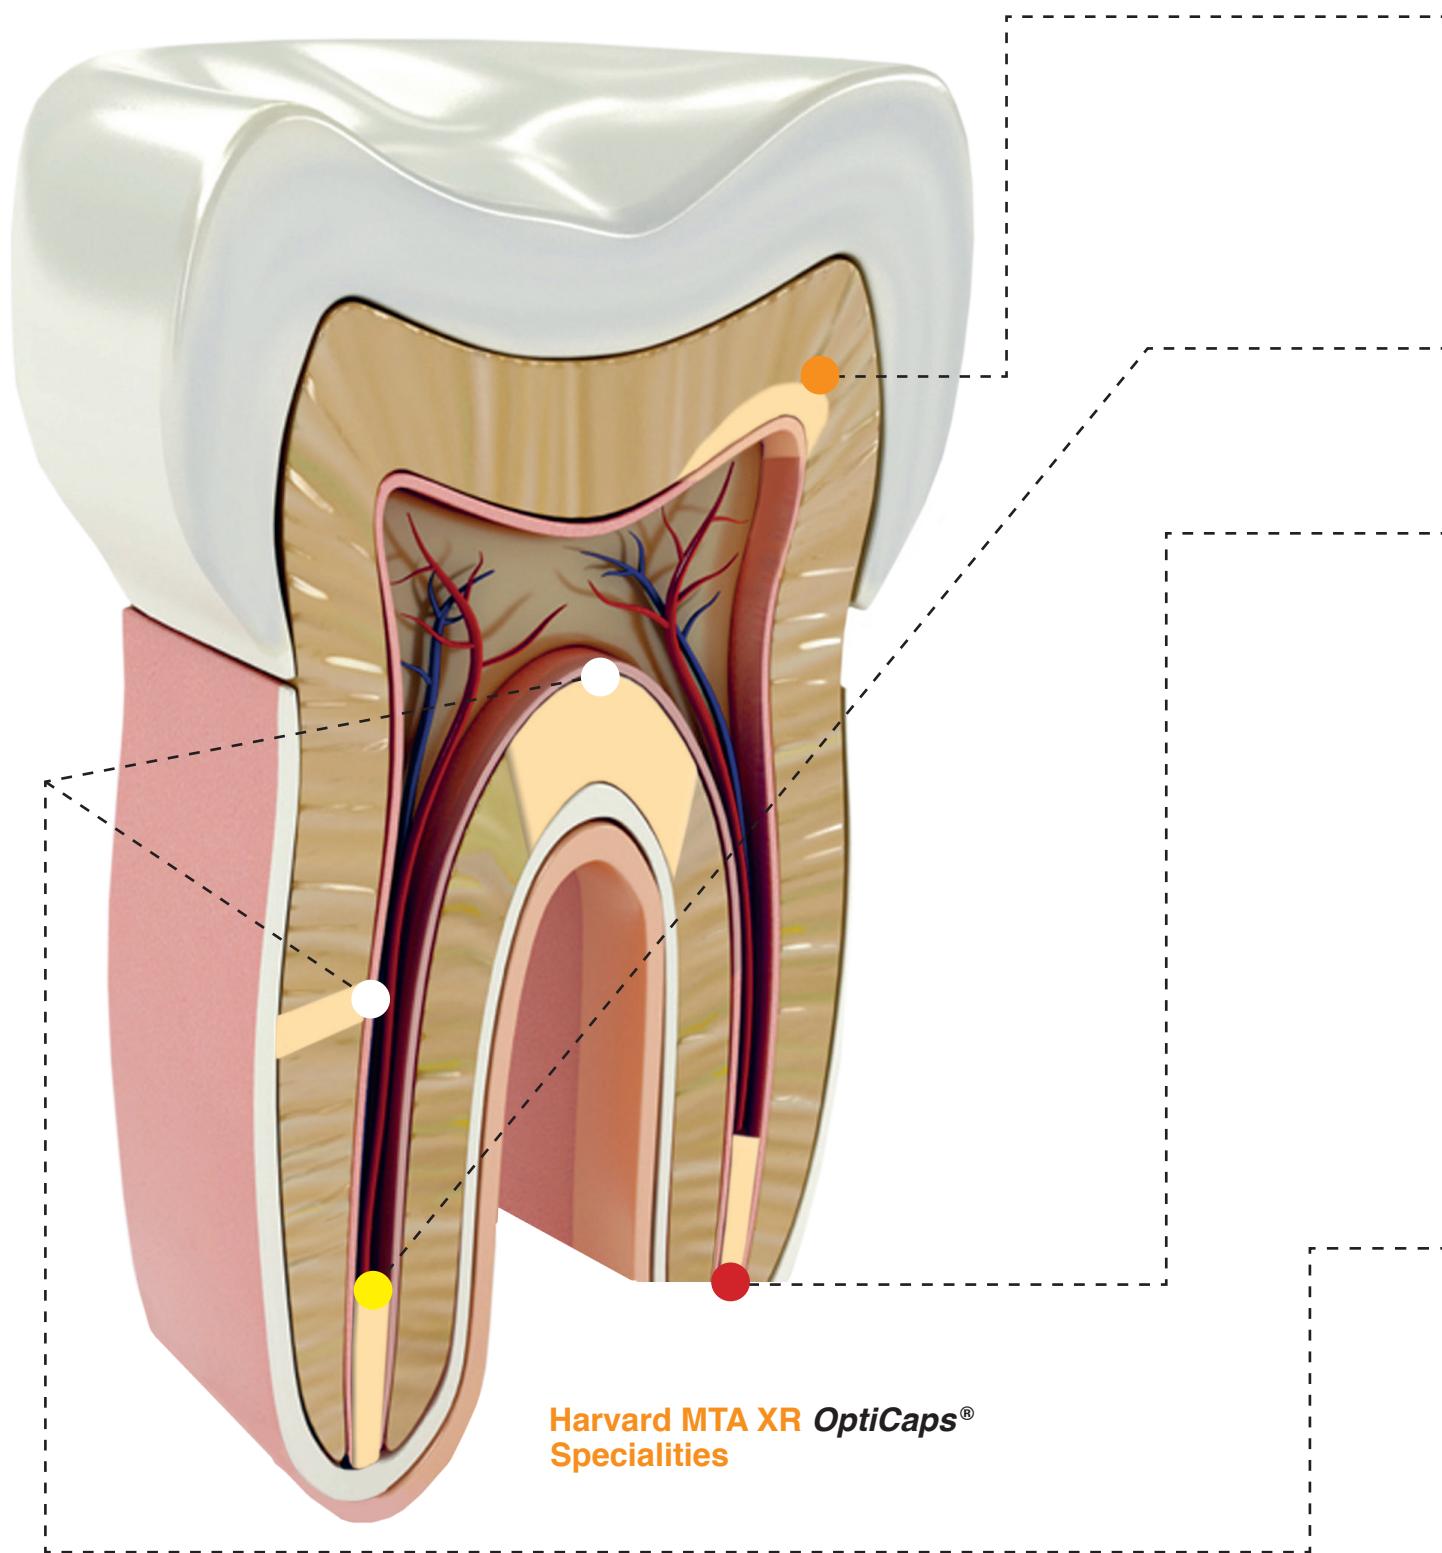

Significant release of bioactive calcium – promotes the formation of hydroxyapatite and tertiary dentin.

Endodontics

2: Root Canal Repair

Harvard MTA. The perfect product
for each endodontic application.

Endodontics

2: Root Canal Repair

Specialities:

Advantages of all Harvard MTA (Mineral-Trioxide-Aggregate) products

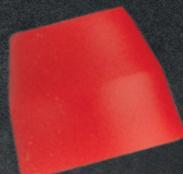

- Forms tertiary dentin
- Biocompatible material
- Excellent bond to dentin
- Material is high alkaline

Harvard MTA XR
Flow Fast OptiCaps®
Ideal for capping of vital pulps

Harvard MTA XR
Flow EWT OptiCaps® &
EndoDirect syringe
Ideal for root end filling
(orthograde)

Harvard MTA XR
Fast OptiCaps®
Ideal for root end filling
(retrograde)

Harvard MTA XR
OptiCaps®
Ideal for sealing of
root canal perforations

Perfection in
4 variations.

Endodontics

2: Root Canal Repair

Harvard MTA XR Flow Fast OptiCaps®

Flowable fast setting MTA cement in capsules

- Flowable consistency
- Extra fast setting
- Specially recommended for pulp capping**
- Mixing time: 30 sec
- Working time: 2:00 min from the start of mixing at 23 °C (73 °F)
- Next clinical step: 3:00 min

Set also in humid conditions

Harvard MTA XR Flow Fast OptiCaps®
2 OptiCaps® ea. 0.25 g,
ea. packed in an aluminum pouch

7081503

Harvard Applier OptiCaps®

7092000

Harvard MTA XR Fast OptiCaps®

Fast setting, extra radiopaque MTA cement in capsules

- Firm consistency
- Extra radiopaque
- Fast setting
- Specially recommended for root end filling (retrograde)**
- Mixing time: 30 sec
- Working time: 2:00 min from the start of mixing at 23 °C (73 °F)
- Next clinical step: 3:00 min

Set also in humid conditions

Harvard MTA XR Fast OptiCaps®

ea. packed in an aluminum pouch

7081506

Harvard MTA XR OptiCaps®

Extra radiopaque MTA cement in capsules

- Firm consistency
- Extra radiopaque
- Specially recommended for filling of root perforations**
- Mixing time: 30 sec
- Working time: 2:00 min from the start of mixing at 23 °C (73 °F)
- Next clinical step: 5:00 min

Set also in humid conditions

Harvard MTA XR OptiCaps®
2 OptiCaps® ea. 0.25 g,
ea. packed in an aluminum pouch

7081505

Endodontics

2: Root Canal Repair

Harvard MTA XR Flow EWT OptiCaps® & EndoDirect syringe

Flowable MTA cement in capsules with extended working time.

The EndoDirect syringe provides the first reliable application form for MTA to fill the apex directly and easily

- Flowable consistency
- Extra long working time (4:00 min)
- **Specially recommended to close simply and directly the apex**
- Mixing time: 30 sec
- Working time: 4:00 min from the start of mixing at 23 °C (73 °F)
- Next clinical step: 10:00 min

Set also in humid conditions

Easy to use:

1. Mix the MTA capsule
2. Fill the endo syringe with the material directly from the capsule
3. Thanks to the flexible endo tip and the endo-stop, fill the MTA cement into the root canal's apex in a controlled way

For the perfect application of **Harvard MTA XR Flow EWT** into the root canal a special EndoDirect syringe is available.

Bended needle tip with individual working length

Filling of the Harvard EndoDirect syringe

Bring piston into the Harvard EndoDirect syringe

Application of MTA XR Flow EWT into the root canal

EndoDirect syringe

with flexible endo tip

Endodontics

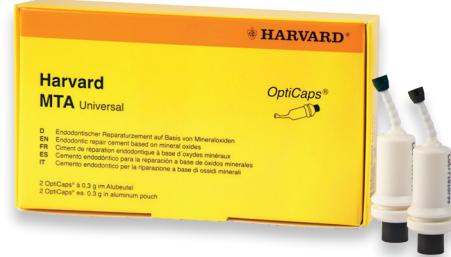

2: Root Canal Repair

Harvard MTA Universal OptiCaps®

Endodontic repair cement based on MTA

- Highly biocompatible material
- Excellent bond to dentin
- Radiopaque
- Firm and homogenous consistency directly from the capsule
- Forms tertiary dentin
- Setting not affected by humidity
- Suitable for pulp capping, sealing root perforations, root end fillings (orthograde or retrograde)
- Mixing time: 30 sec
- Working time: 2:00 min from the start of mixing at 23 °C (73 °F)
- Next clinical step: 5:00 min

Set also in humid conditions

Harvard MTA Universal OptiCaps®
2 OptiCaps® ea. 0.3 g,
ea. packed in an aluminium pouch

Harvard Applier OptiCaps® 7092000

Harvard MTA Universal HandMix

Endodontic repair cement based on MTA, as HandMix

- Biocompatible material
- Excellent bond to dentin
- Radiopaque
- Forms tertiary dentin
- Setting not affected by humidity
- Suitable for pulp capping, sealing root perforations, root end fillings (orthograde or retrograde)
- Very easy to mix

(Next clinical step see page 29)

Harvard MTA Universal HandMix
1 g powder, 3 ml liquid,
dosage spoon, mixing pad, spatula

Harvard CalciumHydroxide

Temporary dressing based on Calcium hydroxide

- Paste with perfect consistency
- As temporary dressing for root canal treatment

Harvard CalciumHydroxide
2 ml syringe, 3 needle tips 7071261

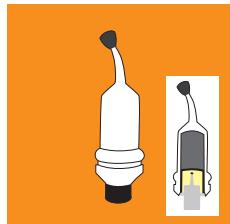

Instructions

for activating and mixing Harvard OptiCaps®

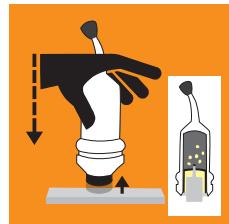

“Click before you mix!”

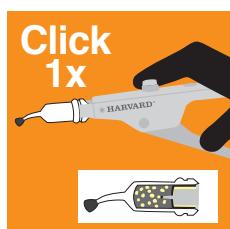

Remove capsule (OptiCaps®) from the pouch

1. OptiCaps® before activation.

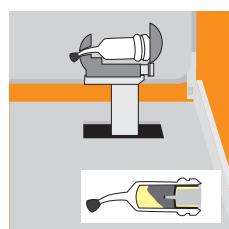

2. For activation of the OptiCaps® press the plunger on a hard and plane surface to the end into the OptiCaps®.

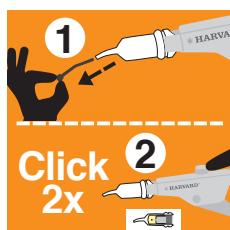

3. Insert the OptiCaps® into the Harvard Applier OptiCaps® and click once to standardize.

Note: The plunger must be at the same level as the bottom of the capsule.

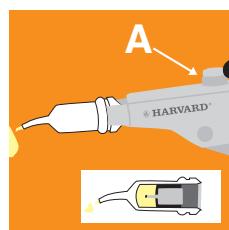

4. Insert the OptiCaps® into a mixer, close lid and mix immediately for the period mentioned in the instructions for use (with about 4300 oscillations / min).

5. Insert the OptiCaps® into the Harvard Applier OptiCaps®. Remove the pin from the nozzle. If not, capsule can burst.

Pull the lever twice (2 clicks) to prime the OptiCaps®.

6. Extrude the mixed material on a glass plate or apply directly. Unlock the gun (push button A) and remove the OptiCaps®.

Only with the Harvard Applier OptiCaps® (Order-No. 7092000) the optimal amount of mixed material is guaranteed.

For the selection of a suitable capsule mixer, our sales and marketing colleagues are gladly available to you.

Mixing & working times of various Harvard OptiCaps® products.

Harvard SuperSnap®

SuperSnap and superhydrophilic vinylpolysiloxane impression material

- Same convenient working time as Harvard PremiumSil – **shortened intra oral setting time**
- Super hydrophilicity for perfect wettability and excellent reproduction of details
- Extremely user- and patient-friendly
- Excellent flow properties
- High elastic recovery, dimension stability
- Intensive colors for excellent legibility
- Available in two Snap-Set times: **Regular Snap** and **Quick Snap**
- Optimal kneadable consistency for the putty products
- Suitable for the sandwich technique and the putty-wash technique
- Different viscosities:
Putty, Putty Soft, Heavy, Mono, Medium, Light

4: Temporary Crown & Bridge Materials

Harvard TEMP C&B

Temporary crown and bridge material, ratio 10:1

- Reliable and easy to use
- Final processing after 5:00 min
- Very good fracture resistance and hardness specially for veneers and longer bridge spans
- Very low polymerization temperature
- Natural esthetics and fluorescence
- High color stability

Harvard TEMP Glaze LC

Varnish for temporary crowns and bridges

- Highly esthetic and shiny surface without polishing
- Ideal for crowns and bridges in the visible area

6: Semi-permanent Luting Cement

Special for implant crowns and bridges:

Harvard Implant Semi-permanent

Dual cure cement for semi-permanent cementation of implant based crowns and bridges

- Safe fixation, easy removal, easy re-cementation
- Elastic polymer film to minimize chewing pressure on the bone
- Excellent sealing, no shrinkage
- Easy removal of excess material
- Contains zinc oxide

7.3: Zinc Phosphate Luting Cement

Harvard Cement. The Original. Since 1892.

Zinc phosphate cement for permanent luting of restorations and for lining.

The classic – well-proven since 1892.

- High compressive strength and low film thickness
- Good biocompatibility
- Easy and safe application
- Unmatched price / performance ratio for luting and lining materials
- Applicable for:
 - Zircon oxide ceramic
 - Silicate ceramic
 - Aluminium oxide ceramic
 - Gold and non precious-metals
- Cement according to DIN EN ISO 9917-1
- Available in two setting times: normal and fast setting
- **Well-proven since 1892**

(Mixing advice see page 46)

Also available in OptiCaps®

- For permanent luting of crowns and bridges
- Quantity for 1 to 2 crowns
- **Mixing time: 10 sec**
- **Working time: 1:30 min**
(from the start of mixing)

7.4: Glass Ionomer Cements for Luting

Resin-reinforced

• Harvard Ionomersin Cem Extra

Light and self cure resin-reinforced glass ionomer cement for luting of crowns and bridges, inlays, onlays and as a liner under composite fillings

- Good esthetics
- Low film thickness
- Practically insoluble
- Improved mechanical properties
- Very low shrinkage
- Set on demand by three types of curing:
self + light cure + classical cement reaction
- Radiopaque
- HandMix or OptiCaps®

8: Transparent Matrix Material

Harvard TransMatrix

Transparent matrix and bite registration material
based on A-silicone

- Highly transparent to allow perfect light-curing of composite through the matrix
- Appropriate final hardness and good detail reproduction
- Original shape remains unaltered
- Dimensionally stable over time and after disinfection
- Perfect consistency and thixotropy
- Fast setting time (1:20 min in mouth)
- Comfortable for the patient with neutral taste and flavor
- Time-saving - directly applied in the mouth
- As well usable as transparent bite registration material

Harvard NeedleTips H18	7095158
with 50 needle tips for Harvard MultiChrome Flow, Harvard UltraFill Flow, Harvard PremiumFlow , Harvard CalciumHydroxide LC	
Harvard NeedleTips H18 white	7083875
with 50 needle tips for Harvard LiquiCord®	
Harvard NeedleTips H20	7091226
with 50 needle tips for Harvard IonoLine, Harvard RestoreFlow	
Harvard NeedleTips H22	7095162
with 50 needle tips for Harvard BioCal®-CAP	
Harvard NeedleTips H25	7095126
with 50 needle tips for Harvard Etch	
Harvard Microbrush®	7095156
with 50 applicators for Harvard InterLock® One, Harvard InterLock®, Harvard Bond SE Mono, Harvard Restore System Kit, Harvard Bond SE Dual	
Harvard Auto-T 1:1 O-Yellow	7098000
with 50 mixing tips for SuperSnap® Light, Medium, Regular/Quick	
Harvard Auto-T 1:1 O-Green	7098010
with 50 mixing tips for SuperSnap® Heavy Regular/Quick	
Harvard Auto-T 1:1 O-Pink	7098020
with 50 mixing tips for SuperSnap® Mono, Regular/Quick	
Harvard IntraTips yellow	7083619
with 50 intra tips for Harvard PremiumSil Light, SuperSnap®, Light Fast, Medium, Medium Fast	
Harvard IntraTips long	7083620
with 50 intra tips long for Harvard ZirconCore, Harvard LuteCem SE	
Harvard Mini 1:1 O-Brown	7083610
with 50 mixing tips for Harvard ZirconCore	
Harvard Mini 4:1 / 10:1 O-Brown	7091100
with 50 mixing tips for Harvard LuteCem SE	
Harvard Mini 4:1 / 10:1 S-Brown	7093050
with 50 mixing tips for Harvard LuteCem SE, Harvard Implant Semi-permanent	
Harvard Mini 1:1 S-Brown	7091050
with 50 mixing tips for Harvard TEMP Cem Esthetic, Harvard TEMP Cem	
Harvard Auto 1:1 / 2:1 light blue	7091060
with 50 mixing tips for Harvard TEMP Cem (25 ml cartridge)	
Harvard Auto 4:1 / 10:1 S-Blue	7094000
with 50 mixing tips for Harvard TEMP C&B, Harvard TEMP C&B Pro	
Harvard Auto 1:1 O-Green	7096000
with 50 mixing tips for Harvard Bite, Harvard TransMatrix, Harvard PremiumSil Heavy / Heavy Fast	
Harvard Auto 1:1 O-Pink	7091200
with 50 mixing tips for Harvard PremiumSil Mono / Mono Fast	
Harvard Auto 1:1 O-Yellow	7091300
with 50 mixing tips for Harvard PremiumSil Light / Light Fast, Harvard PremiumSil Medium / Medium Fast	
Harvard Maxi 5:1 Dynamic	7091400
with 50 dynamic mixers and 2 bayonet rings for Harvard PremiumSil, Harvard SuperSnap®, Putty Soft MaxiMix, Harvard PremiumSil, Harvard SuperSnap® Heavy Fast MaxiMix	
Harvard ErgoGrip	7082220
for Harvard PremiumFlow 2 ml syringe	
Harvard Applier OptiCaps®	7092000
for all OptiCaps®	
Harvard Applier OptiTips®	7095200
for all OptiTips® and ComforTip®s	
Harvard Dispenser Automix 4:1 / 10:1	7095000
for Harvard TEMP C&B, Harvard TEMP C&B Pro	
Harvard Dispenser Automix 1:1	7095100
for Harvard Bite, Harvard TransMatrix, Harvard PremiumSil, SuperSnap®, Light / Light Fast, Medium / Medium Fast, Heavy / Heavy Fast, Mono / Mono Fast	
Harvard Dispenser Automix 1:1 / 2:1	7095600*
for 25 ml cartridge	
Harvard sulcus former – small	7083872
with 100 Sulcus Former for Harvard LiquiCord®	
Harvard sulcus former – medium	7083873
with 100 Sulcus Former for Harvard LiquiCord®	
Harvard sulcus former – large	7083874
with 50 Sulcus Former for Harvard LiquiCord®

Miscellaneous

Mixing Advices

For Harvard Cement

1

Tip:
use a cold glass plate,
especially in warm
countries.

Dispense onto a clean, dry glass plate powder and liquid at approx. 23 °C (73 °F).

2

Divide into 4 portions as follows: 1/2, 1/4, 1/8, 1/8.

3

Mixing: start first 1/8 with the whole liquid quartely within 15 seconds.

4

Add second 1/8 and mix for 15 seconds while spreading.

5

Draw 1/4 into the mixture.

6

Mix while pressing with flat spatula in the next 30 seconds.

7

Mix with the remaining half portion for 30 seconds to obtain an homogen mass.

8

Use the entire surface of glass plate.

9

Ready-for-use cement mix within 90 seconds.

Harvard Cement normal setting:

For luting consistency: powder 1.5 g, liquid 1.0 g

For cavity lining consistency: powder 2.1 g, liquid 1.0 g

Harvard Cement quick setting:

For luting consistency: powder 1.8 g, liquid 1.0 g

For Harvard Polycarboxylat Cement

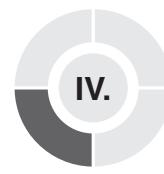

For mixing of polycarboxylate cement the whole amount of powder is divided into two equal halves. One half is further divided into two equal parts (quarter).

In 30 seconds mix one half of the powder into the liquid. Then the other two quarters are mixed in for another 15 seconds each. This will result in a total mixing time of 60 seconds.

The mixing ratio (by weight) of powder to liquid is 2.9 : 1 (luting cement) or 3.6 : 1 (liner).
